

A tankless water heater doesn't store water and saves energy as it is activated only on demand, and the small physical size means it can be fitted close to the point of use.

Temperature controlled instantaneous water heater which can be connected directly to the cold supply and may serve multiple outlets.

Fingertip setting of the temperature; from ambient to 38°C - accurate to $\pm 1^\circ$ with digital readout.

Model EX75T DR P - 75.kw 240v
Model EX95T DR P - 9.5kw 240v

"Made in the USA"

Flow Indicator valve

Range 1 - 10
or 2 - 20 litres per minute

The Eemax Water Heater may be supplied mounted on a panel with the flow meter and valve, ready to connect

Isolating spring check valves on the input and output enable the heater to be installed above the height of the faucet.

Connexions 15mm copper.

These heaters do not store water in an inner tank so mineral and calcium build up is significantly reduced.

Water filters are available with cartridges to remove sediment from the water.

Blue filter vessels, for incoming cold water, with $\frac{3}{4}$ " bspt ports.
